Wright Engineering

At the forefront of cutting edge engineering design fabrication and installation solutions for over 30 years

Based at our headquarters in North Nottinghamshire, Wright Engineering work around the world on complex design and engineering projects.

Our philosophy of commitment to excellence and a continuing investment in the latest technologies ensure we remain a leader within our industry.

Wright Engineering's work ethic and high quality engineering design and fabrication solutions, combined with our experienced site installation teams, have resulted in these new sectors becoming a major contributor to our company turnover.

We are now operating around a £12 million plus turnover, employing a 150+ full time employees. Our core belief is employing well qualified, experienced and motivated staff at all levels within our company. This will continue to allow us to provide the high quality cost effective solutions that our clients need and will be reinforced and developed further in the future.

SHEQ

Safety, Health, Environment & Quality

SHEQ is a technical field that applies several disciplines for continuous improvement of occupational Safety, Health, Environment and Quality factors that impact on any organisation.

This is accomplished by developing processes, or ways of doing work, that moves programs through a structured cycle similar to the "plan-do-check-act" or PDCA cycle.

For more information / enquiries,
please contact Wright Engineering directly

Telephone: 01909 730507
www.wrighteng.co.uk

Wright Engineering has established a history of continued excellence in specialist engineering design and manufacture embodied in a company wide culture of total quality management.

Our professional standards and approach to design and manufacture are also reflected in how we adhere to training and Health and Safety within our organisation, as we appreciate the high standards and accreditations required to partner major blue chip companies.

Our own separate Training and Health and Safety company, Trainright est. 2012, bears testament to Wright Engineering's total commitment to the safety and wellbeing of our staff and those of our client.

Enhanced Core Ethos

We operate within the statutory requirements of a proven Health & Safety programme, based on a professional education and training culture that actively embraces a corporate attitude and drive to continuously deliver Zero Accident Operations.

This core ethos is enhanced by the independent industry-wide accreditations in both Quality and Health and Safety.

CE Marking

EU Construction Market

As of 1st July 2014, the Construction Products Regulation has made it a mandatory legal requirement for all fabricated structural steel components and fabrications for sale on the EU construction market to be CE Marked

The CE Marking certification demonstrates that Wright Engineering have the requisite Factory Production Control (FPC) system which ensures full life-cycle traceability of every component from source through the fabrication process and to final delivery to site.

This verifies compliance with the detailed requirements of BS EN 1090:2-2008 and EN ISO 3834:2 & 3-2005.

Wright Engineering are accredited to Execution Class 3 (EXC3) which has a more demanding approvals standard but allows us to fabricate the vast majority of steel structures.

For more information / enquiries on CE Marking, please contact Wright Engineering directly

Telephone: 01909 730507

Design Fabrication & Installation

Design & Analysis

In-house design and analysis resources to transform client requirements into a detailed design solution.

Our experienced design engineers can perform detailed site surveys enabling them to produce detailed layouts of existing equipment and buildings, thus providing a sound foundation for modifications or new project designs to be accommodated.

Welding and Fabrication

Wright Engineering employ time served boilermakers, platers and welders, who have received all the necessary training and certification, to produce the fabricated items to the exacting standards that our customers rightly demand.

The requirement for coding of welders for specific fabrication work, weld inspection and the carrying out of non-destructive testing to meet design requirements, is routinely carried out by our experienced staff.

Installation & Site Services

Wright Engineering employ dedicated, professional and experienced teams of site installation staff, by doing this we feel that we are able to control the quality of the project installation.

With the advent of the Construction (Design and Management) Regulations, a formal approach to site installations and management of site activities is now mandatory. Wright Engineering has been proactive with regard to complying with the requirements of these regulations.

Products

Wright Engineering's diverse product range spans the materials handling & processing sectors

For more information / enquiries on any of our products listed, please contact Wright Engineering directly

Telephone: 01909 730507

www.wrighteng.co.uk

Structural Steelwork

designed, installed and manufactured to meet your needs and requirements

Conveyor Systems

Our conveyor systems are designed and built to high standards, offering both quality and efficiency

Control Cabins

Experienced staff to tailor Control Cabin specifications and designs to meet the conditions and operator requirements

Silo's / Hoppers / Vessels

Provide British designed and made Silos, Hoppers and Vessels, for a multitude of industries

Bespoke Machinery

At the forefront of cutting edge engineering design and installation solutions for over 30 years, undergoing many bespoke machinery projects

Vibratory Feeders

Electro-Magnetic Vibrating Feeders for accurate and controlled bulk material extraction

Power Transmission Components

Specialty distributor with an unrivalled reputation for the optimisation and repair of existing installations

Ducting

A proven ability to manufacture large diameter ducting to the highest of standards

From design to fabrication quality assurance, Wright Engineering leave no stone un-turned on any structural steelwork project. We have full in-house capability to transform raw steel into install ready items thanks to extensive investment in the latest manufacturing technologies

Services

An unrivalled reputation
for our design,
fabrication, installation
and commissioning
services

For more information / enquiries on any of our services listed,
please contact Wright Engineering directly

Telephone: 01909 730507

Turnkey Projects

As a single discipline or as part of a fully integrated turnkey solution on mechanical & electrical projects

Project Management

A highly efficient team ensures that all contracts are delivered, successfully meeting time, cost, quality and safety requirements

Design & Analysis

In-house design and analysis resources to transform client requirements into detailed design solutions

Welding and Fabrication

Latest manufacturing technology for fast-flow production alongside traditional fabrication skills

Assembly & Testing

Full shop assembly and testing facilities within the confines of our purpose built premises

Site Installation

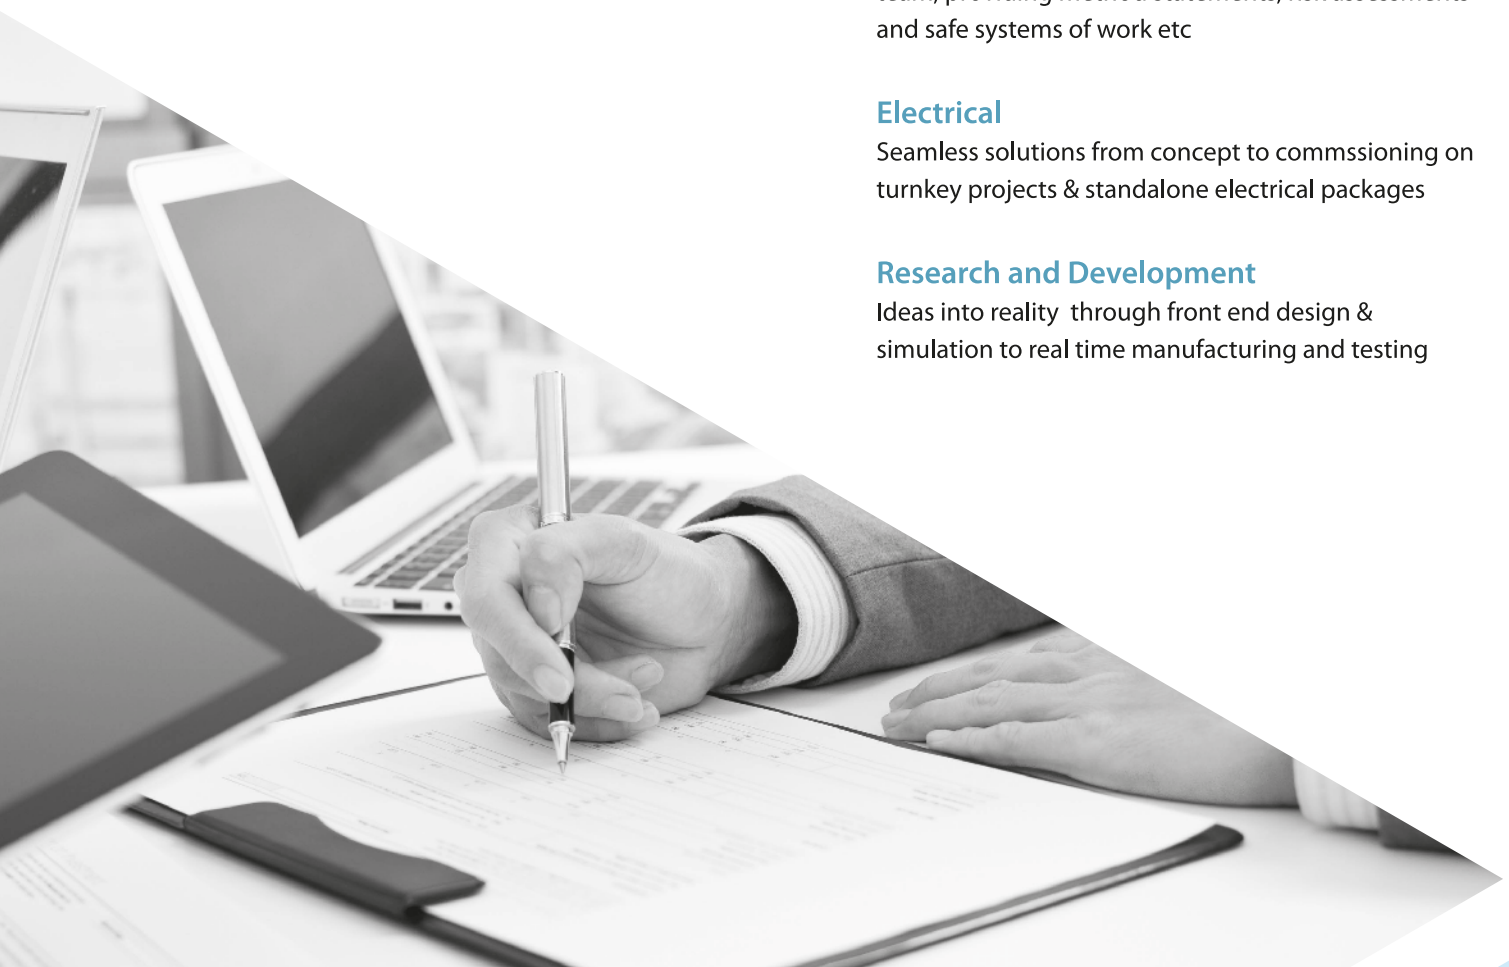

Quality controlled site installation by an experienced team, providing method statements, risk assessments and safe systems of work etc

Electrical

Seamless solutions from concept to commissioning on turnkey projects & standalone electrical packages

Research and Development

Ideas into reality through front end design & simulation to real time manufacturing and testing

We have extensive experience and expertise in assembling, inspecting and testing a wide range of equipment, from individual machine components through to turnkey solutions so that your project is in safe hands with the professional team at Wright Engineering

Working for main contractors, or directly for the power station operator, we have Installed Stone and DSG handling equipment including: Pipe Conveyors / Storage Hoppers and Silos / Steel Framed and Clad Buildings / Maintenance Access Platforms and Stairways / Process Component Fabrications & Installation / Planned Maintenance and Outage Labour

Sectors

Continued success
in our traditional market
sectors has enabled us
to expand into other
areas of expertise

For more information / enquiries on any of the industry sectors listed,
please contact Wright Engineering directly

Telephone: 01909 730507

www.wrighteng.co.uk

Recycling

Our materials handling expertise has enabled us to offer a variety of services and complete project solutions to this growing industry sector

Waste to Energy

With long term objectives to reduce the dependency on fossil fuels, we continue to expand into the future of waste to energy engineering

Power

Providing the UK power industry with effective design, fabrication and installation services

Quarrying & Aggregates

An in-depth knowledge and experience in mining, quarrying, aggregates and factories, our solutions cover the most challenging of projects

Building Products

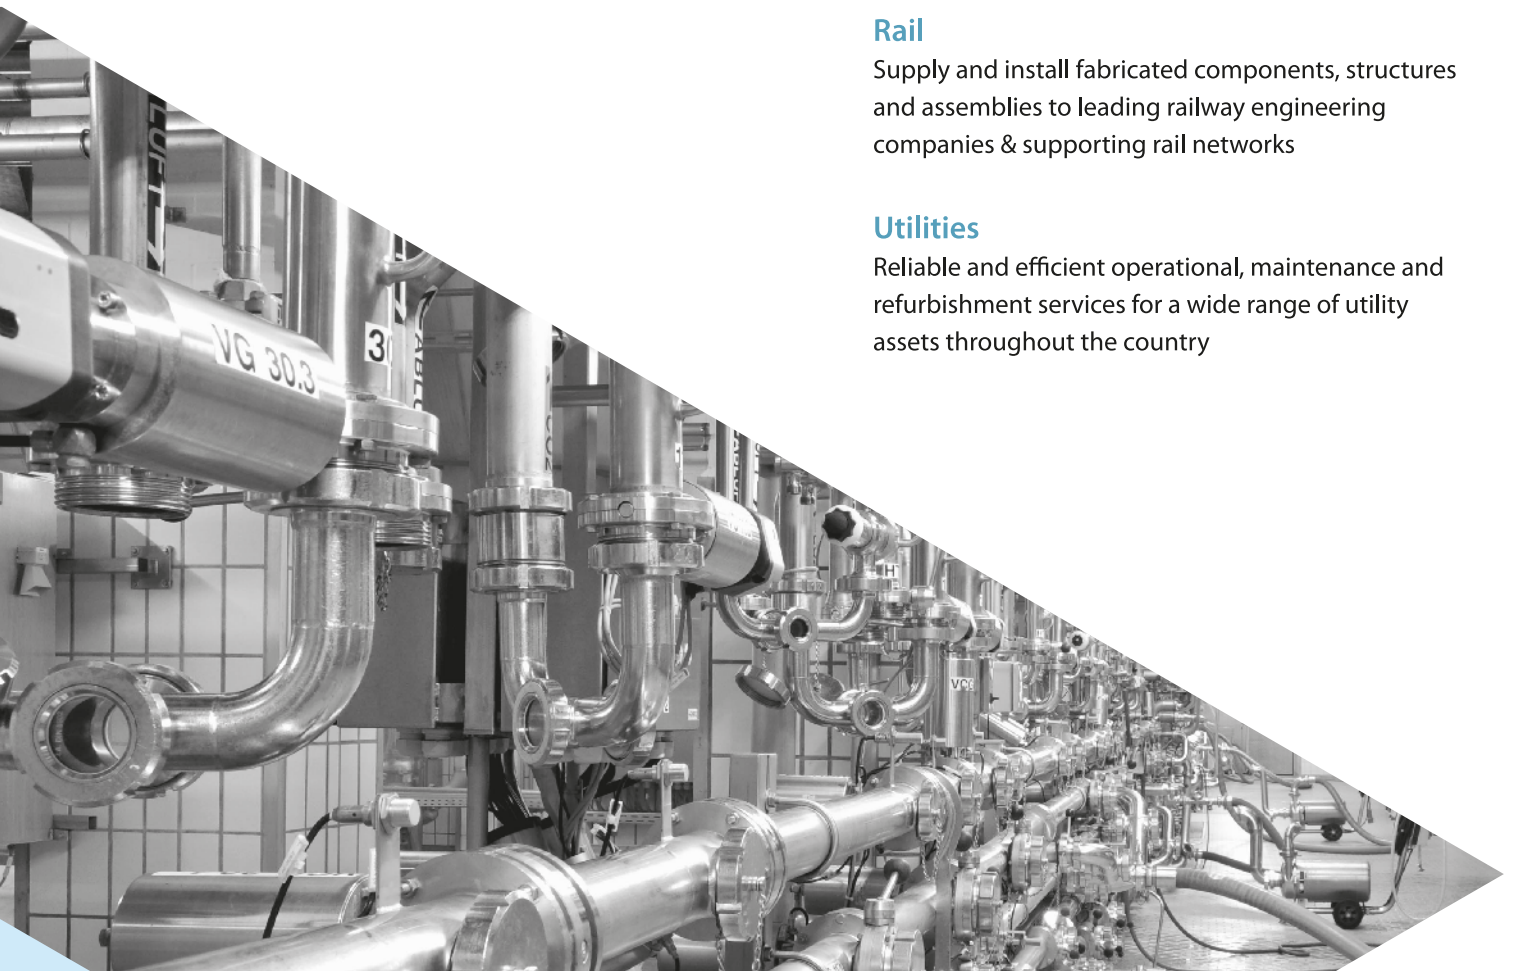

Established, long term relationships with the key building products manufacturers is testament to our knowledge in delivering valuable solutions

Rail

Supply and install fabricated components, structures and assemblies to leading railway engineering companies & supporting rail networks

Utilities

Reliable and efficient operational, maintenance and refurbishment services for a wide range of utility assets throughout the country

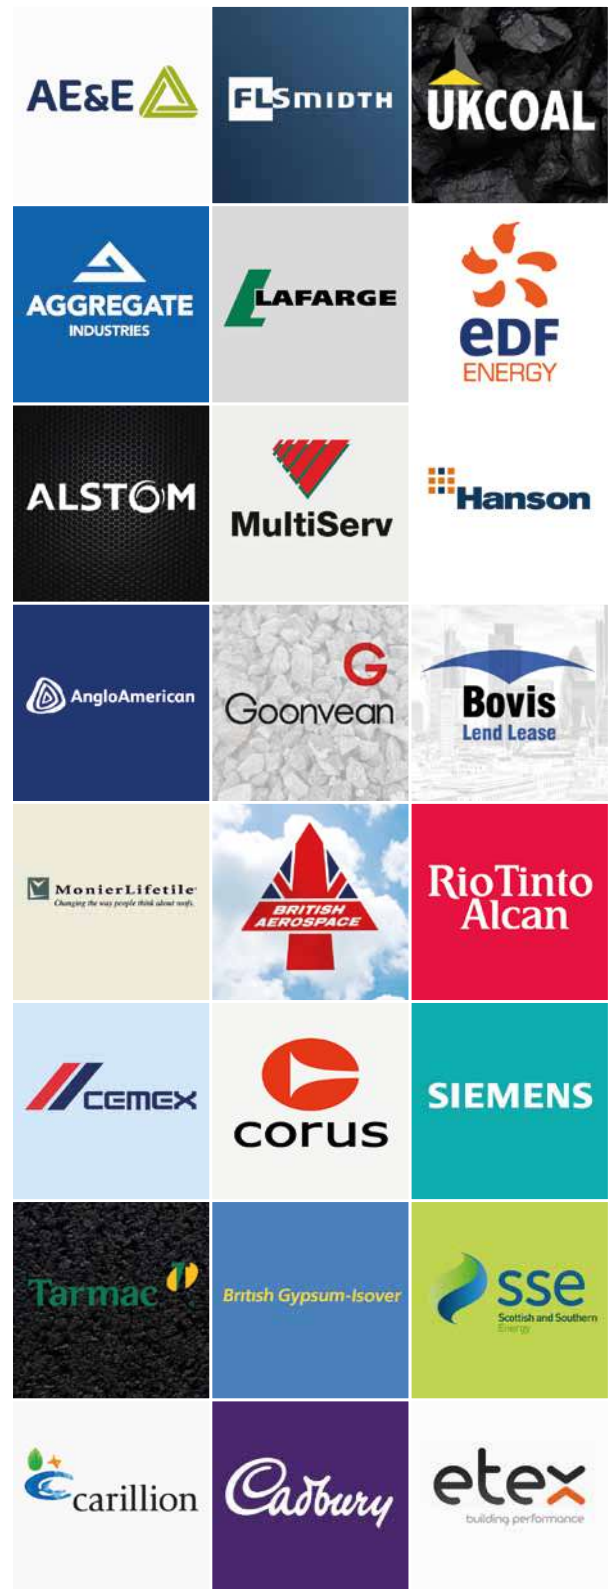

Clients

Wright Engineering have a strong & varied client base, encompassing international blue chip customers

With extensive experience in developing complete engineering project solutions for many of the countries leading blue chip companies, we are proud that our clients, such as Tarmac, British Gypsum, Lafarge and Hanson (to name but a few) have been regular customers of Wright Engineering for over 30 years.

Here we show just a handful of the companies / clients for whom we have worked for

Hitachi Zosen
